Trello Usage for Sprint 0.5 Sprint 1

Our project management tool is Trello. We have utilized Trello by dividing our tasks into different parts and assigning them to different people. From there, we were able to add specifics for each task such as checklists of what needs to be done for each. As we worked on the project, we checked off certain parts of the checklist to allow everyone to see the progress we were making as a team. This also allowed us to see whether everyone was doing their part in a timely matter, and this week, everyone did well. Once a task was done, it would be moved into the completed list.

Scrum Meetings Paragraph

We utilized Scrum Meetings once a week to keep track of progress, look at our plans for the future, and analyze issues that we may have. In our scrum meeting, we talked about creating the Android Project and putting it on Git. We also talked about our Domain Model and Use Case Diagram to ensure that we all have the same idea in mind. Lastly, we ensured that everyone knew what they were doing and then we were able to start work on our projects.
